

Operational Strategy for Climate Resilience and Environmental Sustainability 2022-2025

UNHCR actions are structured around **two** key approaches:

Recognize forcibly displaced and their hosts as **agents of change**

Strengthen the resilience and **protect** forcibly displaced and their hosts from the impact of climate change and environmental degradation.

The strategy recognizes the urgent action required in three major areas:

PREPARE

To improve our predictability of engagement in emergencies brought on by climate-related and other natural hazards and integrate environmental considerations in planning and preparedness for emergency response, including through participatory approaches.

RESPOND

To work with forcibly displaced people and host communities in the most climate vulnerable countries to incorporate climate and environmental considerations in sectoral programming, including innovative energy and reforestation in refugee-hosting areas.

SUPPLY

To improve the sustainability of the end-to-end supply chain, including planning, sourcing, contents, manufacturing processes, procurement, delivery and lifecycle management of core relief items and other goods.
